Javascript Fatigue

A few days ago, I met up with a friend & peer over coffee.

> *Saul: "How's it going?"*
> *Me: "Fatigued."*
> *Saul: "Family?"*
> *Me: "No, Javascript."*

More accurately, I meant *React* and the Javascript ecosystem that comes with it.

. . .

For starters, consider that Pete Hunt asked why React is overwhelming for beginners:

If you use React, you probably share the same experiences with Vjeux:

BLOG

How to Manage JavaScript Fatigue

Many developers are overwhelmed by the rapidly expanding ecosystem of modern JavaScript. Learn how to manage and mitigate JS fatigue.

TL;DR: Most JavaScript developers have heard of or experienced JavaScript fatigue. JS fatigue is the overwhelming sense that we need to learn most of the hottest emerging technologies in order to do our jobs well. This is unattainable and the stress we feel to achieve it is unjustified; so how do we manage and combat JavaScript fatigue?

BOTTOM LINE

CLOSING THOUGHTS

- ~~Learning~~ Choosing is hard.
  - Set filtering rules before you start.
  - Make a list of valid sources.
- Stop learning everything trending on Reddit or HN.
- Set conference notes aside for 1 week.
- Don't do big rewrites. Migrate incrementally.
- Stop doing Resume-Driven-Development
- Developer experience is getting better. Be patient.

WISH~~LIST~~LETTER

Dear MSFT, AAPL, GOOG,

You have access to TC39. When are we going see the JavaScript Standard Library?

Sincerely,

Adrian.

THANK YOU
